Adresse : Yeralai Nagar, Padali Washi Road, Padali. - 416010, Kolhapur.

About Us :

Green Harvest Agro Farm is the sole proprietorship company Located in the Kolhapur District , Maharashtra, India . We manufacture wide range of eco-friendly coconut coir fiber products for various applications like sugarcane Nursery , Vegetable Nursery, Fruits Nursery, Horticulture, Floriculture, Home Gardening . We offer High quality products in competitive price with our effective customer support.

What is Cocopeat?

Cocopeat, also called coir peat or coco coir, is a natural and organic growing medium made from the fibrous pith of coconut husks. Lightweight and spongy, it retains 8–10 times its weight in water while maintaining excellent aeration and drainage, preventing soil compaction and waterlogging. With a neutral to slightly acidic pH (5.5–6.8), it suits a wide range of plants and helps balance alkaline soils. Cocopeat is naturally resistant to bacteria, fungi, and weeds, making it clean and safe for gardening. It is long-lasting, reusable for 3–5 years, and has strong nutrient-buffering capacity, enabling it to store and release nutrients effectively—making it highly valuable for both gardening and agriculture.

Key Features of Cocopeat :

- 100% organic and biodegradable
- Excellent water retention capacity
- Enhances aeration in soil
- Promotes strong root development
- Neutral pH (5.5–6.8)
- Reusable for multiple growing cycles

Benefits of Cocopeat :

- Reduces water usage by up to 50%
- Improves soil structure
- Prevents soil compaction
- Supports microbial activity
- Maintains ideal moisture content

Applications of Cocopeat :

- Seed germination trays
- Potting mix
- Hydroponics
- Home gardening
- Nursery growing media
- Mushroom farming

What is Vermicompost ?

Vermicompost is a nutrient-rich organic fertilizer created through the breakdown of biodegradable waste by earthworms.
It enhances soil structure, improves aeration, and increases water retention.
Packed with beneficial microbes, it boosts plant growth naturally.
It is completely chemical-free and safe for all types of plants.
Vermicompost is widely used in gardening, farming, and horticulture for healthier and more productive soil.

Key Features of Vermicompost

- 100% natural fertilizer
- Rich in nitrogen, phosphorus, and potassium (NPK)
- Contains humus and beneficial microorganisms
- Improves soil fertility

Benefits of Vermicompost

- Enhances plant growth and yield
- Improves soil aeration and texture
- Boosts water retention capability
- Strengthens plant immunity
- Provides slow and steady nutrient release

Applications of Vermicompost

- All crops and plants
- Home gardening
- Organic farming
- Horticulture and landscaping
- Nursery cultivation

How to Use Vermicompost

- For pots: Mix 20–25% vermicompost with soil
- For farms: Apply 1–2 tons per acre
- Top dressing every 30–45 days

Packaging & Product Options

- **Cocopeat** :

1 kg Bag
25 kg Bag
Loose Cocopeat (Expanded Form)

- **Vermicompost** :

1 kg Bag
5 kg Bag
25 kg Bag
Bulk Orders Available for Farms
